Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1.   (Currently Amended) A method [performed by a computer] for calculating travel costs for a user comprising:

an information request step, wherein the user is prompted to enter [desired travel product] information for a plurality of travel products;

an information receipt step, wherein [the desired travel product] information <u>for the plurality of travel products</u> is received from a user;

a calculation step, wherein the received information is used to search through a database to determine the cost of the [desired] <u>plurality of</u> travel products; and

a reporting step <u>performed after the calculation step</u>, wherein the cost of each <u>of the plurality of</u> travel product<u>s</u> is reported to the user.

a prompting step wherein the user is prompted to request alternative travel product information; and

an alternative travel request receipt step wherein a user request to receive alternative travel product information is received.

a second calculating step wherein a discount database is accessed to determine alternative travel products to offer the user; and

an alternative travel reporting step wherein alternative travel products are reported to the user.

2. (Currently Amended) The method [performed by a computer] for calculating travel costs of claim 1 wherein the reporting step and the alternative travel reporting steps comprise displaying a range of prices for each travel product based upon availability of products from different product providers; and displaying a total price range for all of the requested travel products.

3. (Currently Amended) The method [performed by a computer] for calculating travel costs of claim 2 wherein the information request step further comprises prompting a user to select an airline departure date, a departure location, a destination location.

4. (Currently Amended) The method [performed by a computer] for calculating travel costs of claim 3 wherein the information request step further comprises prompting a user to select a hotel location and a number of nights to reside at the hotel.

5. (Currently Amended) The method [performed by a computer] for calculating travel costs of claim 4 wherein the information request step further comprises prompting a user to select a rental car location and a number of days a rental car will be rented.

6. (Currently Amended) The method [performed by a computer] for calculating travel costs of claim 5 wherein as part of the calculation step, the received duration of time between the airplane departure date and the airplane return date is used to determine the number of nights to reside at the hotel and the number of days a rental car will be rented.

7.   (Currently Amended)   The   method   [performed   by   a computer] for calculating travel costs of claim 6 wherein as part of the calculation step, the airplane destination city is used to determine the hotel location and the rental car location.

8.   (Currently Amended)   The   method   [performed   by   a computer] for calculating travel costs of claim 5 wherein alternative travel products are found by altering at least one of the group consisting of the departure flight city, the departure flight date, the destination city, the return flight date, the number of nights of hotel rental, the type of hotel rented, the number of days of car rental, and the type of car rented to conform to the requirements of at least one discount in the discount database.

9.   (Currently Amended)   The   method   [performed   by   a computer] for calculating travel costs of claim 8 further comprising a prompting step wherein a user is prompted to purchase travel products.

10.   (Currently Amended)   A   method   [performed   by   a computer] for calculating travel costs of claim 9 further comprising:
     a personal information prompting step wherein the user is prompted to enter personal information;
     a personal information receiving step wherein personal information is received from a user;
     a payment information prompting step wherein the user is prompted to enter payment information;

-4-

a payment information receiving step wherein payment information is received from a user; and

a reservation step wherein travel product providers of the purchased products are contacted, reservations are made, and travel products purchased.

11. (Currently Amended) The method [performed by a computer] for calculating travel costs of claim 10 wherein the information request step further comprises prompting a user to select at least one of the group consisting of a cruise departure date, a cruise departure location, a cruise destination location, a cruise return date, a cruise provider, a cruise ship, a cruise name, and a cruise passenger class.

12. (Currently Amended) A method [performed by a computer] for calculating travel costs for a user comprising:

an information request step, wherein the user is prompted to enter [desired travel product] information for a plurality of travel products;

an information receipt step, wherein [desired travel product] information <u>for the plurality of travel products</u> is received from a user;

a first calculation step, wherein the received [desired travel product] information <u>for the plurality of travel products</u> is used to search through a database of travel products to determine the cost of the [desired] <u>plurality of</u> travel products;

a second calculation step, wherein the database of travel products is searched for alterations of the received desired travel product information to take advantage of discounts; and

a reporting step <u>after the first calculation step</u>, wherein the cost of each <u>of the plurality</u> travel product<u>s</u> is reported to the user.

13.   (Currently Amended) The   method   [performed   by   a computer] for calculating travel costs of claim 12 wherein the information request step further comprises:

prompting   a   user   to   enter   at   least   one   of   the   group consisting   of   desired   airline,   cruise,   train,   hotel   and   car rental information.

14.   (Currently Amended) A system for determining travel product prices for users comprising:

an information server coupled to a computer network;

a user terminal coupled to the computer network;

a   first   database   coupled   to   the   computer   network   for storing airplane flight information; and

a   second   database   coupled   to   the   computer   network   for storing hotel information;

a   third   database   coupled   to   the   computer   network   for storing rental car information;

wherein the information server is configured to receive <u>a</u> request[s] for information <u>on a plurality of travel products</u> from the user terminal, aggregate airplane flight information from the first database, hotel information stored in the second database,   and   car   rental   information   stored   in   the   third database,   and transmit the airplane flight information, hotel information, and car rental information to the user terminal <u>to be displayed as a single report with information on each of the plurality of travel products</u>.

15. (Previously Presented) The system for determining travel product prices of claim 14 further comprising:

an airplane flight discount database;

a hotel discount database; and

a car rental discount database;

wherein the information server is further configured to obtain discounted travel product information from the airplane flight discount database, the car rental discount database, and the car rental discount database; and

wherein the information server is further configured to transmit discounted travel product information to the user terminal.

16. (Cancel)

17. (Currently Amended) A method [performed by a computer] for calculating travel costs for a user comprising:

an information request step, wherein the user is prompted to enter [desired travel product] information for a plurality of travel products;

an information receipt step, wherein the [desired travel product] information for the plurality of travel products is received from a user;

a first calculation step, wherein the received information is used to search through a database to determine the cost of the [desired]plurality of travel products; and

a reporting step performed after the first calculation step, wherein the cost of each of the plurality of travel products is reported to the user;

a second calculating step wherein a discount database is accessed to determine alternative travel products to offer the user; and

an alternative travel reporting step wherein alternative travel products are reported to the user.

18. (Currently Amended) The method [performed by a computer] for calculating travel costs of claim 17 wherein the information request step further comprises prompting a user to select attributes for at least one of the group consisting of cruise, airplane, hotel and car rental related travel products.

19. (Currently Amended) The method [performed by a computer] for calculating travel costs of claim 18 wherein the reporting step comprises displaying a range of prices for each travel product based upon availability of products from different product providers; and displaying a total price range for all of the requested travel products.

20. (Currently Amended) The method [performed by a computer] for calculating travel costs of claim 18 wherein the alternative travel reporting step comprises displaying alternative travel products in sets, and displaying a total price range for all of the selected alternative travel products in a given set.

21. (New) A method comprising:

providing a user interface to a user over a communications network;

causing the user interface to prompt the user to enter information for a plurality of travel products into the user interface;

receiving the information over the communications network;

searching a first database on a server to determine the cost of the plurality of travel products;

generating a report to be displayed through the user interface, the report comprising the cost of each travel product to be displayed concurrently;

causing the user interface to prompt the user to request alternate travel product information;

receiving alternative travel product information from the user;

accessing a second database to determine alternative travel products to offer the user; and

generating a report to be displayed through the user interface, the report comprising the each alternative travel product is reported.

22. (New) The method of claim 21, wherein a processor in the server executes the searching of the first database.

23. (New) The method of claim 21, further comprising:

transmitting the report over the communication network to a user device.

24. (New) The method of claim 21, wherein the communications network is the Internet.

25. (new) The method of claim 21, wherein a single database comprises the first and second databases.
